

Metal Detectable PTFE Tape

Tefsil 6 MDT Adhesive is a self adhesive backed PTFE coated glass cloth tape. It has the added benefit of a foil layer which allows the tape to be detected on metal detectable packaging machines.

We offer two thickness in this colour which are based on 0.08mm and 0.15mm thick products. The added layer of foil further adds to the overall thickness.

The blue colour helps in that visually it is easy to identify if any part of the tape comes away due to mechanical damage.

Our stock width start out at 500mm wide and are supplied on roll lengths of 30mtr coils.

Technical data sheets and samples are available upon request.
